Summary

I am a Final-year Computer Engineering undergraduate with industry experience in backend development, microservices, and enterprise application development. Skilled in Java Spring Boot, ReactJS, Docker, REST APIs, and OAuth2 security, with hands-on experience building scalable and secure systems. Contributed to enterprise application migration, authentication solutions, and microservice-based backend development during software engineering internship experience. Familiar with clean architecture, API design, performance optimization, and modern AI-assisted development workflows.

Skills Summary

- Programming: Java, JavaScript, PHP, C++, Python, SQL
- Frameworks & Tools: Spring Boot, React, Docker, Git, Postman, WSO2 API Manager, Github Copilot, Jmeter, IntelliJ, VS code, Cursor
- AI / ML: Scikit-learn, LSTM, XAI, Neural Networks, Model Interpretability, Prompt Engineering
- Databases: MySQL, PostgreSQL, MongoDB
- Soft Skills: Leadership, Analytical Thinking, Adaptability, Fast Learning, Project Management

Professional Experience & Personal Projects

Software Engineering Intern

Entgra Pvt Ltd

Nov 2025 – May 2026

Key Contributions

- Contributed to enterprise application management migration activities from legacy Product UEM systems while implementing profiling and monitoring improvements in the Serviceman application.
- Designed and developed a reusable OTP Service Starter Library for centralized OTP authentication and integrated the solution into Product IDNF, validating workflows through JMeter-based performance testing.
- Developed and enhanced REST endpoints in the Serviceman application.
- Implemented Docker-based development and deployment setup for backend services.
- Integrated OAuth2 Token Introspection mechanisms for secure API authentication and authorization.
- Worked with Spring Boot microservice architecture, layered backend design, and secure API communication.
- Collaborated within engineering teams using Git workflows, specification-driven development practices, and AI-assisted development tools including GitHub Copilot Agent to improve implementation speed and debugging efficiency.

Technologies Used

- Java, Spring Boot, Docker, OAuth2, REST APIs, **JMeter**, Git, PostgreSQL, **WSO2 API Manager**.

Fitness Tracker (Microservices Based Project) [GitHub](#)

Aug 2025 – Oct 2025

- Engineered a fitness platform using **Spring Boot**, **ReactJS**, **Gemini API** and **Spring Cloud**.
- Built event-driven microservice orchestration using **RabbitMQ**, **Eureka**, and **API Gateway**.
- Secure authentication with **Keycloak & OAuth2**, integrating **MongoDB** and **PostgreSQL**.

Premier League Player Stats [GitHub](#)

June 2025 – July 2025

- Developed a **Spring Boot REST API** to filter player stats by club, nation, position, and name.
- Implemented pagination and **layered architecture** for scalability and clean code.

Other Notable Projects

- Automated Examination System [GitHub](#) Feb 2025 - April 2025
- Understanding the LSTM behaviors using XAI techniques (Research) [GitHub](#) Jan 2025 - Present
- Edu-Stream - Streaming platform [GitHub](#) Feb 2025 - April 2025

Education

University of Jaffna, BSc. In Engineering (Hons.)

2022 April – 2026 July

Specialized in Computer Engineering.

- **GPA: 3.08 / 4.00**
- Expected Graduation: 2026

Badulla Central College

2012 - 2020

GCE Advanced Level (2020)

Stream: Physical Science (Combined Mathematics - **A**, Physics - **B**, Chemistry - **B**)

Certifications

- Learn Spring 6, Spring Boot 3, Spring Core, Spring REST, JPA, Spring MVC, Thymeleaf, Spring Security, Hibernate, MySQL : [Udemy](#)
- GIT, GitLab, GitHub Fundamentals for Software Developers(Udemy) : [Udemy](#)
- Web Design for Beginners(UOM) : [University Of Moratuwa](#)
- Introduction to Python (for Beginners) (UOM) : [University Of Moratuwa](#)
- Cursor Vibe Coding Pro: Build Any App from Scratch with AI (Udemy) : [Udemy](#)
